

Contract Manufacturing & Integration Services

Precision through experience

Our goal as a contract manufacturer is to provide OEM customers with a complete manufacturing solution that can manufacture their products to completion in a single location with a core competency in fluid systems.

We have expertise in taking new designs through the various manufacturing ramp stages and onto the released production stage. We can produce sub-assemblies or full scale products and we can easily manage overflow manufacturing needs.

Quality through capability

For almost 20 years our team of highly skilled assemblers and machinists have allowed us to offer unmatched capability.

We offer engineering, DFM and full materials programs to make us a true “one stop shop”

We’ve built successful customer relationships through trust, open communication and performance.

At the heart of all of these systems, resources, and capabilities is our quality program. Within Apex Industries, quality is more than a process requirement, it’s part of our culture.
